VP TECHNOLOGIES

COMPANY PROFILE · 2026

Technology partner for businesses that can’t afford downtime.

IT infrastructure, network and security, field installations and custom software, delivered by one accountable team across Romania and Europe.

One accountable partner for the technology a business runs on.

VP TECHNOLOGIES is the technology services brand of VP INVESTMENTS SRL, based in Bucharest. We design, install and run the systems companies depend on every day: servers and cloud, networks and security, store and site IT, and the software that ties them together.

We work for retail chains, logistics companies and growing businesses, on site and remotely, and we report in plain language to the people who make decisions.

Delivery and reporting

IT problems are business problems.

Fragmented vendors, reactive support and no clear view for management turn everyday technology into a risk to revenue, reputation and growth.

Operational risk

Downtime, slow incident response and constant firefighting cost sales and team capacity.

Security exposure

Without a security baseline, access control and an incident plan, every month adds risk.

Growth friction

Disconnected systems and manual workarounds slow down new sites, new staff and new initiatives.

Our answer: one team that owns infrastructure, security, field work and software, with clear reporting at every step.

Four service areas, fifteen services.

Infrastructure & cloud

- Windows Server administration
- Linux server management
- cPanel & WHM management
- Microsoft Exchange
- Microsoft 365 administration

Network & security

- Network design & implementation
- Structured cabling installations
- Firewall, VPN & intrusion detection

Software & digital

- WordPress development
- Online stores
- Custom CRM & ERP
- AI development & automation

Support & field services

- On-site & remote IT support
- Microsoft Windows support
- Payment terminal services

Trusted by retail, logistics and technology companies.

RSG Global
Store IT installations & support

BlueWireless
Network installations

A selection from our client portfolio. Engagement details are confidential.

On site, at scale, documented.

Our engineers deliver hands-on work across stores, warehouses and remote sites, with every visit recorded in the client portal.

Store IT rollouts

Installation and support of store IT: networks, POS, devices and back-office equipment.

Site surveys

Structured surveys with measurements, photos and a bill of materials before any installation.

Starlink & connectivity

Starlink and 4G/5G backup links, installed and configured for business continuity.

Network installations

Cabling, cabinets, Wi-Fi and switching for new and existing sites.

Payment terminals

Deployment, configuration and troubleshooting of POS and payment terminals.

On-site support

Break-fix and smart-hands support, coordinated with remote engineers.

A structured model, no surprises.

01

Assess

Business and technical review, risks, dependencies and success criteria agreed with management.

02

Execute

Phased implementation with checkpoints, quality gates and regular status reports.

03

Optimise

Stabilise, document and improve continuously against agreed operational goals.

ENGAGEMENT MODELS

Managed services

Ongoing operation and support of your systems.

Project delivery

Defined scope, timeline and deliverables.

Advisory

Architecture, security and technology guidance.

Clients see the work, not just the invoice.

Every client has secure access to a client portal with the status of their sites and the evidence behind each job.

Plus a weekly briefing on vp-tech.ro/blog: the tech events that matter to businesses, explained in plain language.

Live status per site

Installations, surveys and support calls with their progress.

Reports

Survey and installation reports, ready to share internally.

Photo evidence

Before and after photos from every on-site visit.

Invoices & offers

Billing documents in one place, per client and site.

What makes the difference.

01

Single accountability

One team for infrastructure, security, field work and software. No finger-pointing between vendors.

02

Visibility for management

Clear status, risks and decisions in plain language, not only technical logs.

03

Multi-domain expertise

From server hardening and network design to AI automation and e-commerce.

04

Built for the long term

Engagement models that grow with you, not one-off projects that leave gaps.

Let’s start with a conversation.

A short, no-commitment discovery call to understand your priorities and agree the right next steps.

01
Discovery call
Your goals, current setup and priorities.

02
Assessment
Risks and opportunities, with recommended actions.

03
Proposal
Scope, engagement model, timeline and investment.
